Professional Summary

Full stack developer building web applications professionally since 2020, with a frontend focus. Experience modernizing AngularJS interfaces, implementing React/TypeScript microfrontends and shared components, and developing NestJS services, PHP features and SQL-backed APIs. Comfortable working across UI, backend services and business integrations.

Technical Skills

Frontend: React, Redux, TypeScript, JavaScript, HTML, CSS/SCSS, microfrontends.

Backend & data: Node.js, NestJS, PHP, REST APIs, MySQL, PostgreSQL, SQL optimization.

Testing & delivery: Jest, Playwright, Docker, CI/CD, Linux, observability.

Integrations: Jira API, Scaleway API, Mixpanel, Figma, Openbravo/Etendo.

Professional Experience

Full Stack Developer | We Are Psh

September 2021 - Present

- Modernize AngularJS interfaces with React, Redux and TypeScript, collaborating with UI/UX on Figma designs and existing product flows.
- Implement React/TypeScript microfrontends and contribute to a shared component library and team coding conventions.
- Build TypeScript/NestJS microservices and REST APIs backed by MySQL; develop features in a PHP backend monolith.
- Integrate frontend and backend events with Mixpanel for product analytics; optimize MySQL queries and relational schemas.
- Troubleshoot Docker deployment issues and work with CI/CD and observability; support teammates in clarifying requirements and product context.

Full Stack Developer | Futit Services

January 2020 - September 2021

- Developed Openbravo WebPOS interfaces for ERP customers and provided direct client support for application workflows.
- Integrated Jira with Openbravo/Etendo to synchronize tasks, statuses and worklogs; connected Scaleway's API to automate server provisioning.
- Managed and optimized PostgreSQL databases, with additional training in query optimization.

Selected Personal Projects

Nout | Offline-first notes with optional cloud sync

React/TypeScript and TipTap, with localStorage/Firestore repository adapters and timestamp-based migration on sign-in. Tests cover data-layer behavior, Firebase security rules and offline browser workflows using Vitest, Firebase emulators and Playwright.

github.com/paablobs/Nout | nout.it

Nimvo | Local-first personal finances in an encrypted file

React/TypeScript with SQLite/WebAssembly in a Web Worker, versioned migrations and integer-cent calculations. Encrypted file exports use Web Crypto (AES-256-GCM, PBKDF2). Unit/component tests and Playwright flows cover persistence, encrypted containers and browser interactions.
